VELOCITY

Instagram Graph API Reference

April 2026

Account Credentials

Field	Value
Facebook User ID	1538576027879867
Instagram Business Account ID	17841473581813349
Facebook Page Name	AstroSoft
Facebook Page ID	658322564036441
Post ID (Sample)	17958788559103281
API Version	v25.0
Access Token	Generated via Graph API Explorer (short-lived, ~1hr)

API Endpoints

Base URL: https://graph.facebook.com/v25.0/

1. Posts This Month

```
17841473581813349/media?fields=id,timestamp,media_type,like_count&limit;=50&access;_token=YOUR_TOKEN
```

Returns all media posts. Filter by timestamp to count posts in current month (April 2026). Returns like_count per post.

2. Reach This Week

```
17841473581813349/insights?metric=reach.=week&access;_token=YOUR_TOKEN
```

Returns daily reach values for the past week. Sum all values for total weekly reach. Example result: 55 + 56 = 111 total reach.

3. Likes This Week

```
17841473581813349/media?fields=like_count,timestamp&limit;=50&access;_token=YOUR_TOKEN
```

Returns like_count per post. Filter by timestamp for this week and sum all like_count values.

4. Views / Impressions (Per Post)

```
17958788559103281/insights?metric=views.=lifetime&access;_token=YOUR_TOKEN
```

Note: In API v22+, 'impressions' was renamed to 'views'. Returns total number of times the post was played or displayed. Example: 109 views.

5. Reach + Saved (Per Post)

```
17958788559103281/insights?metric=views,reach,saved.=lifetime&access;_token=YOUR_TOKEN
```

Returns views (109), reach (56 unique accounts), and saved (0) for a single post.

6. Likes + Comments Count (Per Post)

```
17958788559103281?fields=like_count,comments_count&access;_token=YOUR_TOKEN
```

Returns like_count (2) and comments_count (3) for the specified post.

Engagement Rate Formula

Formula:

```
Engagement Rate = (Likes + Comments + Saves) / Reach x 100
```

Calculation with current data:

```
= (2 + 3 + 0) / 56 x 100
= 5 / 56 x 100
= 8.9%
```

JavaScript Implementation:

```
const likes = 2; // from like_count field
const comments = 3; // from comments_count field
const saves = 0; // from saved metric
const reach = 56; // from reach metric

const engagementRate =
((likes + comments + saves) / reach * 100).toFixed(1);
// Result: 8.9%
```

Dashboard Metrics Summary

Dashboard Card	Current Value	API Endpoint Used
Posts This Month	1	/media?fields=timestamp
Reach This Week	111 (55+56)	/insights?metric=reach&period=week
Likes This Week	2	/media?fields=like_count
Engagement Rate	8.9%	Calculated from post insights
Views (Impressions)	109	/insights?metric=views&period=lifetime
Saved	0	/insights?metric=saved&period=lifetime

Important Notes

1. Access Token expires in ~1 hour. For production, exchange for a long-lived token using your App Secret.
2. Add 'instagram_manage_insights' permission in Graph API Explorer for full insights access.
3. Metric names changed in v22.0+: use 'views' instead of 'impressions', 'like_count' instead of 'likes'.
4. Account-level engagement metrics require posting history. Per-post insights work immediately.
5. Replace 'YOUR_TOKEN' in all URLs above with the Access Token from Graph API Explorer.
