Meta API Success Guide

Project: Velocity | Antigravity Editor Integration

Verified Configuration

Tested and working in **Graph API v25.0**:

IG Business ID: 17841473581813349
Page Name: WeFix (AstroSoft)

Success Steps for Integration

1 Real-Time Profile Totals

Best for the main UI dashboard. Use the ID node directly.

```
GET /v25.0/17841473581813349?
fields=followers_count,media_count,name,biography
```

2 Account-Level Insights

Fetch Reach and Views for the account. Note the 2026 requirement for *total_value*.

```
GET /v25.0/17841473581813349/insights?
metric=views,reach&metric_type=total_value&period=day&date_preset=last_
28_days
```

3 Fetching All Posts

Retrieves your *media_count* (142) posts with their individual performance metrics.

```
GET /v25.0/17841473581813349/media?
fields=id,caption,media_type,media_url,timestamp,like_count,insights.m
etric(impressions,reach,saved)
```

Technical Specs

Required Scopes

instagram_basic **instagram_manage_insights** **pages_read_engagement** **pages_read_user_content**

Critical Rule: In v25.0+,

```
total_count
```

cannot be nested in fields. Always append

```
&summary=true
```

to the URL parameters to get total counts.
