Velocity AI: DM Automation Blueprint

Official Integration Guide for Instagram Messaging & Comment Triggers

---

1. Required Permissions (The Master List)

Ensure your **Page Access Token** includes these scopes in the Meta Explorer:

Permission Scope	Purpose
`instagram_manage_messages`	Read/Send DMs & Story replies [cite: 3.1]
`instagram_basic`	Read profile info and media IDs [cite: 3.1]
`pages_manage_metadata`	Subscribe to Webhooks for real-time alerts [cite: 2.2]
`pages_read_engagement`	Read post comments for trigger keywords [cite: 3.2]
`instagram_manage_insights`	Fetch reach/save data for the Critic Agent [cite: 1.2]

2. The Full Technical Flow

Step A: Identity Discovery

Fetch your unique **Instagram Business ID** (distinct from username).

`GET /v22.0/me?fields=instagram_business_account`

Step B: The Comment-to-DM Trigger (Private Reply)

When a user comments a keyword (e.g., "PRICE"), send an instant DM.

Endpoint: `POST /v22.0/{comment-id}/private_replies`

```
{ "message": "Hey! Here are the details you requested... [Link]" }
```

Rule: 1 private reply allowed per unique comment ID [cite: 5.2].

Step C: Inbound Conversation Sync

Fetch the agent's inbox to process user questions.

`GET /v22.0/{ig-biz-id}/conversations?fields=messages{message,from}`

3. Strategic Guardrails (2026 Compliance)

- **The 24-Hour Window:** Automation only works within 24 hours of a user's last interaction [cite: 1.1].
- **Rate Limits:** Stay under **200 messages/hour** to avoid shadowbanning [cite: 1.1].
- **Connected Tools:** "Allow Access to Messages" must be toggled ON in IG mobile settings [cite: 3.1].

4. Scaling to "70 LPA" Quality

Integrate the **Actor-Critic** model: The Actor draft replies, the Critic checks if the tone matches the brand's 11-step onboarding guide before the API call is executed [cite: 1.2, 3.2].
